

HEXYL NICOTINATE IN COSMETICS

Introduction

Hexyl nicotinate is the organic compound of nicotine acid, used in skin care and cosmetics. Regenerate tired dull skin and boost the skin's natural defenses against irritants. It helps to normalize the pH balance of the skin and regulate oil gland secretion. Hexyl nicotinate is principally used, alone or in association with other nicotinates, at a concentration of 1 to 2 % in creams.

Applications

- 1 Used in hair loss creams and lotions as vasodilator
- 2 Used in almost all slimming and tanning cosmetic formulations
- 3 It is used to reducing and smoothing fine lines and wrinkles.

Benefits

- 1 Preferred over Niacin due to its better penetrating power.
- 2 Enhance blood circulation.

Specifications

Test	Specification	Test Method
Appearance	Form: Clear liquid Colour: Colourless	Visual
Purity	> 99.0 %	By GC
Moisture Content	< 0.3 %	KF Titration
Odour	Typical ester smell	Visual
IR Spectrum	Complies to standard	IR Spectroscopy

Product FDA Status

It is not recommended for food contact polymers.
